

Fiberglass Containment Buildings

The protection of our environment is a key issue when storing hazardous materials. Properly containing chemicals is a necessary step for any business in ensuring that products are stored safely.

RM Products innovative containment floor design provides a continuous fiberglass material from floor to wall to ceiling.

The chemical resistance of fiberglass is an ideal match for this application. Fiberglass will not rot, rust or corrode in the presence of even the most corrosive chemicals.

RM Products factory assembles all spill containment buildings, making them "ready to use" upon delivery. If the desired location of the spill containment unit

changes, the building can be easily relocated by a forklift or tilt-n-load truck.

Spill containment buildings may require a grated floor placed on top of the fiberglass pan (pan pictured on right centre) which allows spillage to flow under and remain below the walking space in the enclosure. When required, steel or fiberglass grating can be supplied. (as pictured on right at bottom).

Additional options for this application include explosion proof electrical equipment, ventilation and ramps. These or any other required options can be added to your enclosure to meet your specifications.

Fiberglass pan (above) holds spilled liquid, it is mounted to modular building and then sealed with fiberglass for seamless flow from floor to ceiling.

RM Products Fiberglass Modular Buildings

RM Products Ltd's prefabricated fiberglass structures are available in a wide range of sizes and designs to suit your specific need. In addition to standard sizes RM Products is proud to specialize in custom designs. From concept to final product RM's CAD design and support team provide a total solution to your equipment

enclosure needs. Panel style and specific requests (including doors, windows, electrical, insulation, containment floor and vents) are customizable to suit the exact requirements. The modular design allows your building to grow as your needs grow. RM Products buildings are easy to install by others or our assembly team can be provided.
