

## **ELECTRICAL MOUNTING**

It is very simple to install additional mechanical components the the interior of RM's fiberglass structures. The internal structural flanges provide a convenient place to fasten or mount electrical boxes or cable clips for wiring.

Holes can easily be cut to mount through wall equipment such as exhaust fans and a/c units.

Panels can be re-enforced to hold the weight of larger hvac systems that may be required.

Cable clips and conduits can be mounted the interior surface of the insulated panels as well as the interior flanges of the parts.
